Work log, phone app and API

12 November 2026

8	1	0	1
map changes	new default text size	committed	API restart needed

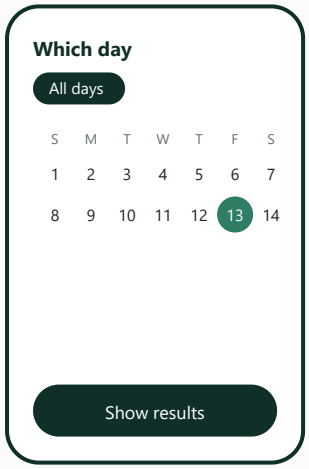

All of this is built and type-checked. Nothing is committed, and most of it has not been tried on a phone. The drawings below are simple sketches of each change, not screenshots.

MAPS

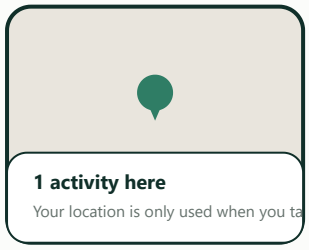

Card pulls up over the map

Pulling the activity card up takes it to the search bar and covers the map. While it is up, the search bar only filters that list; the map stays where it is. Clearing the search with the x, or pulling the card down, lowers the keyboard.

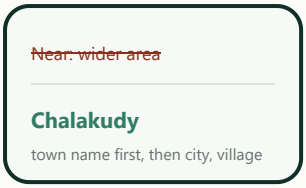

HERE filter: calendar for the day

The row of upcoming dates is replaced by a calendar, from today to one year ahead. Tap a day to see only that day. "All days" clears it. It is hidden while you search.

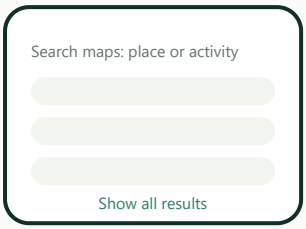

Pin card: "How far?" removed, no flash

The "How far?" button is gone from the card that opens when you tap a pin. The flicker when you tap the empty map is fixed: the card keeps the pin's activities while it slides down, instead of switching to the full list too early.

"Near me" names your town

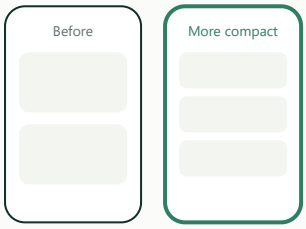

In Chalakudy it now says Chalakudy. The lookup uses a closer zoom and takes the town name first. **Needs an API restart** and a deploy on the live site.

HERE map search

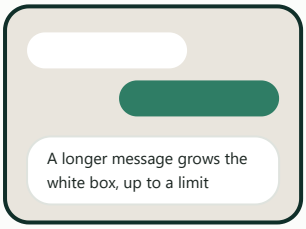

Search by place name, activity name or category (coffee, yoga, sports). Results arrive 20 at a time, with "Show all results", and the server does a light query.

LOOK AND SIZE

Back to the last build's look, new default "More compact"

Everything from the last build's look is back, with the new features kept. The new default text size is "More compact", matched to an iPhone XS at its smallest text size. The Text size choice is back in Settings. Home header slimmer, cards, pills and photos smaller, Next up shown as separate cards, a live pill on THERE, avatar default forest green with white initials, dock hides while you scroll.

Chat

Only the white input box grows with the text and fits it tightly (up to 150 high), then shrinks back after sending. The unread count updates correctly when you open a chat.

CREATE, SIGN-UP AND FIXES

- **Time picker:** the hour wheel flips AM/PM (PM goes to AM, AM goes to PM). Create's place step shows a map preview. Durations 1, 2, 3, 4, 6 hours.
- **Sign-up:** password length hint, control characters refused, "email already used" message. Onboarding swipes.
- **Android calendar:** Saturday was missing in the date picker, fixed.
- **Counts:** Following and Followers numbers now match their lists.
- **Trip review:** white cards, summary and dates cards, no dark colour.

SETUP

- The app points to **https://here-there.susmitha.site**.
- Google keys are out of the frontend and read from the **secrets/** folder. The Google files are still tracked in git; add the EAS file secrets before removing them.

STILL OPEN

- Restart the local API for the town-name fix; the live site needs a deploy.
- App crash on reload: cause not found, needs the error text.
- Header colour question (THERE tan band, stray greens): unanswered.
- Docs generator fails on `POST /v1/admin/appeals/{id}/reply` (older issue).
- Italian text for new strings; THERE search "first 5 + Show all"; Home search paging.

- THERE trip card may flash like the HERE card did; not changed.
